NETGUARD · NETWORK MONITORING AND SECURITY

Every branch, every link, every threat. On one screen.

Netguard is a monitoring and security platform built for businesses with many branches. It watches your firewalls, Wi-Fi, internet links, servers, power and Microsoft 365 sign-ins, and tells you in plain language what needs attention. It runs on your own server, so your data stays on your network.

What you get

Branch and link health

FortiGate firewalls, VPN and SD-WAN, fibre, LTE and Starlink, with flap detection and SLA evidence for your provider.

Wi-Fi, devices and servers

UniFi access points and clients, switches, NAS, UPS power and servers, checked by SNMP, ping, HTTP, SSH or WinRM.

Security operations

Threat-intel matching, Beacon Hunter for hidden malware, MITRE ATT&CK cases, and responses that wait for your approval.

Identity protection

Microsoft Entra ID brute force, password spraying, sign-ins from untrusted countries and per-user behaviour baselines.

Trading readiness

A morning check that every branch can trade: links, the ERP path, tills, card payments and power.

Reports for the board

Weekly executive PDF, live wallboard, alert trends, VAPT report, and ISO 27001, NIST and Zero Trust scores.

Why it matters

673,000
failed firewall admin logins a day, uncovered by Netguard at one customer

45,000
alerts a month reduced to a short list of real cases

15 min
UPS runtime warning before a branch goes dark

See it on your own network. Netguard demos are arranged personally. Email sales@taryntech.co.zw or use the form at www.taryntech.co.zw.
