TARYN-OS · THE AI OPERATING SYSTEM

Your work, done by asking.

Taryn-OS is an operating system with AI at its core. It feels as familiar as the desktops your team already uses, and Taryn, the built-in assistant, does the routine work when you ask in plain English or by voice. It always asks before it changes anything.

What you get

Ask, and it is done

Fix a slow PC, join Wi-Fi, add a printer or find a file by asking. Taryn acts through approved tools and logs every action.

Voice control for everyone

"Hey Taryn" works offline. Say "show numbers" to click anything on screen, or dictate documents and emails.

Taryn Shield security

Antivirus, firewall, ransomware, USB and sign-in protection, with alerts that can be sent to Netguard.

Work apps built in

Mail with phishing checks, Taryn Write for policies and SOPs, Taryn Sheets, automations and a Teams note-taker.

Runs the apps you need

The Taryn Store offers Linux apps, many Windows programs through a compatibility layer, and Android apps.

Offline and private

A local AI model keeps data on the PC. Taryn Link brings your Android phone or iPhone to the desktop.

Why it matters

Local
AI runs on the PC, so it works without internet

Ask first
every change waits for your approval

One OS
familiar layout, your apps, your data

Try it with your team. Taryn-OS trials are issued on request. Email sales@taryntech.co.zw or use the form at www.taryntech.co.zw.
